What are the key risks that are specific to the issuer?

- The long-term commercial success of the Group depends on its ability to find, acquire, develop and commercially produce oil and gas reserves. There is a risk that additional commercial quantities of oil and gas will not be discovered or acquired by the Group.

- The Group's financial performance is affected by oil and gas prices. Any substantial and extended decline in the price of oil and gas would have an adverse effect on the carrying value of the reserves and resources, borrowing capacity, revenues, profitability and cash flows associated with the operation of the Group's assets. Insufficient pipeline capacity and expensive, variable alternative transport options have also made Canadian crude oil prices highly sensitive to pipeline and refinery disruptions, leading to significantly lower prices for Canadian producers compared to WTI and Brent crude oil prices.
- The Group's facilities and operations result in the emission of greenhouse gas (GHG). Ongoing and unpredictable government policies, regulation and legislation, aimed at restricting GHG emissions and promoting a low-carbon economy are expected to raise the Group's operating expenses and potentially devalue its oil and gas assets in the long term. In addition, governmental political strategies to reduce GHGs, including adherence to international limits, may significantly affect the Group's operations and financial condition. Heightened scrutiny of licenses and permits could cause delays, restrictions, or even halt the development of assets, impacting productivity and associated costs.
- The Group's brand and commercial success may be materially affected by reputational risks related to climate change. The fossil fuel industry faces reputational risks due to societal pressure regarding greenhouse gas emissions. Maintaining a positive reputation is crucial for the Group's success, as negative impact may lead to delays in regulatory approvals, higher operating costs, reduced investor confidence, and potential challenges from public opposition, legal actions, or climate-related litigation, posing significant financial and operational threats.
- The Group's facilities and operations is undertaking various projects. Project interruptions could lead to delays in expected revenues, and significant cost overruns might render projects uneconomical for IPC. The execution of projects is influenced by various external factors beyond the Group's control, including capacity constraints, regulatory approvals, weather, and unexpected cost increases, posing challenges in completing projects within expected timelines and budgets.

What are the key risks that are specific to the securities?

- The Company's ability to redeem the Bonds with cash may be limited. Although individual bondholders shall have a right of pre-payment of the Bonds upon the occurrence of certain change of control events, it is possible that the Company may not have sufficient funds to make the required redemption of Bonds.
- The terms and conditions of the Bond Terms will allow for modification of the Bonds without the consent of bondholders.
- The Bonds may be subject to optional redemption by the Company, which may have a material and adverse effect on the value of the Bonds.

2 RISK FACTORS

The risk factors included in this Section 2 "Risk factors" are presented in a limited number of categories, where each risk factor is sought placed in the most appropriate category based on the nature of the risk it represents. Within each category the risk factors deemed most material for the Group, taking into account their potential negative effect for the Company and its subsidiaries and the probability of their occurrence, are set out first. This does not mean that the remaining risk factors are ranked in order of their materiality or comprehensibility, nor based on a probability of their occurrence.

2.1 Risks relating to the Group's business and the oil and gas industry

2.1.1 Exploration, development and production risks

Oil and gas operations involve many risks that even a combination of experience, knowledge and careful evaluation may not be able to overcome. The long-term commercial success of the Group depends on its ability to find, acquire, develop and commercially produce oil and gas reserves. Without the continual addition of new reserves, any existing reserves associated with the Group's oil and gas assets at any particular time, and the production therefrom, will decline over time as such existing reserves are exploited. There is a risk that additional commercial quantities of oil and gas will not be discovered or acquired by the Group. Production delays and declines from normal field operating conditions cannot be eliminated and can be expected to adversely affect revenue and cash flow levels to varying degrees.

Future oil and gas development may involve unprofitable efforts, not only from dry wells, but also from wells that are productive but do not produce sufficient petroleum substances to return a profit after drilling, operating and other costs. Completion of a well does not assure a profit on the investment or recovery of drilling, completion and operating costs. In addition, drilling hazards or environmental damage could greatly increase the cost of operations, and various field operating conditions may adversely affect the production from successful wells. These conditions include delays in obtaining governmental approvals or consents, shut-ins of connected wells resulting from extreme weather conditions, insufficient storage or transportation capacity or other geological and mechanical conditions. Production delays and declines from normal field operating conditions cannot be eliminated and can be expected to adversely affect revenue and cash flow levels to varying degrees.

Oil and gas exploration, development and production operations are subject to all the risks and hazards typically associated with such operations, including hazards such as fire, explosion, blowouts, cratering, hydrocarbon releases and spills, each of which could result in substantial damage to oil and gas wells, production facilities, other property and the environment or personal injury. In accordance with industry practice, the Group will not fully insure against all of these risks, nor are all such risks insurable. The Group maintains liability insurance in an amount that it considers consistent with industry practice. Due to the nature of these risks, however, there is a risk that such liabilities could exceed policy limits, in which event the Group could incur significant costs.

2.1.2 Volatility in oil and gas commodity prices

The marketability and price of oil and gas that may be acquired or discovered by the Group is and will continue to be affected by numerous factors beyond its control. The Group's ability to market its oil and gas may depend upon its ability to access space on pipelines that deliver oil and gas to commercial markets. The Group may also be affected by deliverability uncertainties related to the proximity of its reserves to pipelines and processing and storage facilities, the capacity of such pipelines and facilities, and operational problems affecting such pipelines and facilities as well as extensive government regulation relating to price, taxes, royalties, land tenure, allowable production, the export of oil and gas and many other aspects of the oil and gas business.

Prices for oil and gas are subject to large fluctuations in response to relatively minor changes in the supply of and demand for oil and gas, market uncertainty and a variety of additional factors beyond the control of the Group. These factors include economic conditions in Europe, Asia, the United States, Canada and elsewhere, the actions of OPEC (Organization of the Petroleum Exporting Countries, which as per date of this Prospectus, consists of 13 member countries, located in the Middle East, Africa, and South America) and OPEC+ (an informal coalition or alliance that includes additional non-OPEC countries), strategic petroleum reserve (SPR) management by the United States, the conflict in Ukraine, the impact of pandemics (including Covid-19), governmental regulation, political instability in the Middle East and elsewhere, the foreign supply

of oil and gas, risks of supply disruption, the price of foreign imports and the availability of alternative fuel sources.

Oil and gas prices have fluctuated widely during recent years and may continue to be volatile in the future. Any substantial and extended decline in the price of oil and gas would have an adverse effect on the carrying value of the reserves and resources, borrowing capacity, revenues, profitability and cash flows associated with the Group's assets and may have a material adverse effect on the business, financial condition, results of operations and prospects associated with the Group's assets.

The Group's financial performance also depends on revenues from the sale of commodities which differ in quality and location from underlying commodity prices quoted on financial exchanges. Of particular importance are the price differentials in Canada between the Group's heavy crude oil (in particular the heavy crude oil differential) and quoted market prices. The market price for heavy crude oil and bitumen in Canada is generally lower than market prices for light oil, due principally to the higher costs associated with refining a barrel of heavy crude oil and higher transportation costs (diluent is required to be purchased and blended with heavy crude oil to transport on most pipelines). Heavy crude oil differentials are also influenced by other factors such as capacity and interruptions, refining demand and the quality of the oil produced, all of which are beyond the Group's control. It is difficult to predict future price differentials and any increase in heavy crude oil differentials could have an adverse effect on the Group's business, financial condition, results of operations and cash flows.

In addition, there has not been, at times, sufficient pipeline capacity to export all Canadian crude oil and the availability of alternative transport capacity is more expensive and variable, therefore, the price for Canadian crude oil is very sensitive to pipeline and refinery outages. This has resulted in significantly lower prices being realized by Canadian producers compared with the WTI price (West Texas Intermediate, a light oil reference price) and the Brent price (a different grade that also serves as an oil reference price) for crude oil. In addition, the pro-rationing of capacity on inter-provincial pipeline systems continues to affect the ability to export oil and gas from Canada. There can be no certainty that current investment in pipelines will provide sufficient long-term export capacity or that currently operating systems will remain in service. There is also no certainty that short-term operational constraints on pipeline systems, arising from pipeline interruption, refinery outages and/or increased supply of crude oil, will not occur.

In order to transport crude oil production in Canada to sales markets, the Group is required to meet certain pipeline specifications. Heavy crude oil and bitumen is usually blended with a lighter hydrocarbon (commonly referred to as diluent) to increase its flow characteristics. The cost of diluent is generally correlated to crude oil prices. A shortfall in the supply of diluent may cause its price to increase which would adversely affect the Group's financial position and cash flow.

2.1.3 Transition risks related to climate change

The Group's facilities and operations, and the oil and gas that the Group markets, result in the emission of greenhouse gas (GHG) which makes the Group subject to GHG emissions legislation and regulation. Governments continue to evaluate and implement policy, legislation, and regulations focused on restricting GHG emissions commonly and promoting adaptation to climate change and the transition to a low-carbon economy. It is not possible to predict what measures governments may implement in this regard, nor is it possible to predict the requirements that such measures may impose or when such measures may be implemented. Given the evolving nature of climate change policy and the control of GHG emissions and resulting requirements, including carbon taxes and carbon pricing schemes implemented by varying levels of government, it is expected that current and future climate change regulations will have the effect of increasing the Group's operating expenses, and, in the long-term, potentially reducing the value of oil and gas assets.

Regulatory climate change related risks arise from increased or amended environmental regulation. A breach of such regulations may result in the imposition of fines or issuance of clean up orders in respect of the Group or the Group's assets, some of which may be material. Furthermore, management of the Group believes the political climate appears to favour new programs for environmental laws and regulation, particularly in relation to the reduction of GHG emissions or emissions intensity. There is a risk that any such programs, laws or regulations, if proposed and enacted, may contain emission reduction targets which will require substantial capital investments to adapt processes in place or lead to financial penalties or charges as a result of the failure to meet such targets.

Climate change policy is evolving at regional, national and international levels, and political and economic events may significantly affect the scope and timing of climate change measures that are ultimately put in place. Implementation of strategies by any level of government within the countries in which the Group operates, and whether to meet international agreed limits, or as otherwise determined, for reducing GHGs could have a material impact on the operations and financial condition of the Group. Increased scrutiny of applications for oil and gas licenses, permits and authorizations to develop assets and projects could lead to delay, limit or prevent future development of assets or affect the productivity of assets and the costs associated.

In addition, concerns about climate change and public discussion that oil and gas production may be associated with climate change have resulted in a number of environmental activists and members of the public opposing the continued exploitation, transportation and development of fossil fuels. Given the evolving nature of the debate related to climate change and the control of GHGs and resulting requirements, it is not possible to predict the impact on the Group and its operations and financial condition.

Emission and carbon tax regulations in Canada federally and regionally are evolving and as these regulations are established or amended, they may have an impact on organizations involved in heavy oil production. Canada has taken steps to address climate change by establishing the Canadian Net-Zero Emissions Accountability Act that enshrines in law the Government of Canada's commitment to achieve net-zero GHG emissions by 2050 and issuing the 2030 Emissions Reduction Plan that describes the measures Canada is undertaking to reduce emissions to 40 to 45 percent below 2005 levels by 2030 and achieve net-zero emissions by 2050. It is difficult to assess the overall impact these regulations will have on the Group at this time but it could result in increased costs to comply, delays in having projects approved and potentially a reduction in demand for oil from these regions, all of which could have a material negative impact on the Group's business.

2.1.4 Reputational risks

Reputational risks arise from the surge of societal pressure on the fossil fuel industry in relation to its contribution to global greenhouse gas emissions. Maintaining a positive reputation in the eyes of investors, regulators, communities, employees and the general public is an important aspect for the success of the Group. Negative impact on the industry and the Group's reputation could result in the long-term delays in obtaining regulatory approvals, increased operating costs, lower investor confidence, or availability of insurance and financing.

Oil and gas operations may be subject to public opposition. Such public opposition could result in higher costs, delays or even project cancellations due to increased pressure on governments and regulators by special interest groups including Indigenous groups, landowners, environmental groups and other organizations, blockades, legal or regulatory actions or challenges, increased regulatory oversight, reduced support of governments, delays in, challenges to, or the revocation of regulatory approvals, permits and/or licenses, and direct legal challenges, including the possibility of climate-related litigation.

2.1.5 Project risks

The Group is undertaking various projects, including Phase I of the Blackrod project. Project interruptions may delay expected revenues from operations. Significant project cost overruns could make a project uneconomic. IPC's ability to execute projects depends upon numerous factors beyond its control, including: processing, pipeline and storage capacity, availability of water, electricity, gas, diluent and other operational supplies, effects of weather, availability of personnel and equipment, unexpected cost increases, accidents, regulatory and third party approvals and commercial arrangements, stakeholder consultations (including Indigenous consultation) and regulatory changes (including carbon tax). As a result of these and other factors, the Group may be unable to execute projects on time, on budget, or at all.

2.1.6 Inflationary pressures and costs

The Group's operating costs could escalate and make operations unprofitable due to supply chain disruptions, inflationary cost pressures, equipment limitations, escalating supply costs, commodity prices, and additional government intervention. Labor costs, abandonment, reclamation, gas, electricity, water, diluent and chemicals are examples of some of the operating and other costs that are susceptible to significant fluctuation. The inability to manage costs may impact project returns and future development decisions, which could have an adverse effect on financial performance. The cost or availability of oil and gas field equipment may adversely affect IPC's ability to undertake projects. The oil and gas industry is cyclical in

nature and is prone to shortages of supply of equipment and services. These materials and services may not be available when required at reasonable prices. A failure to secure the services and equipment necessary to operations or projects for the expected price, on the expected timeline, or at all, may have an adverse effect on financial performance.

2.1.7 Operational risks relating to facilities and pipelines

The pipelines and facilities associated with the Group's assets, are exposed to operational risks that can lead to hydrocarbon releases, production interruptions and unplanned outages. Other operating risks relating to the facilities and pipelines associated with the Group's assets include: the breakdown or failure of equipment; breakdown or malicious attacks on information systems or processes; the performance of equipment at levels below those originally intended; operator error; disputes and other issues with interconnected facilities; and catastrophic events such as natural disasters, fires, explosions, fractures, acts of terrorists and saboteurs and other similar events, many of which will be beyond the control of the Group. The occurrence or continuance of any of these or other operational events could curtail sales or production or materially increase the cost of operating the facilities and pipelines associated with the Group's oil and gas assets and reduce revenues accordingly.

The Group's financial performance is significantly affected by the cost of operating and the capital costs associated with its assets. Operating and capital costs are affected by a number of factors including, but not limited to inflationary price pressure, scheduling delays, failure to maintain quality construction standards and supply chain disruptions. Fluctuations in operating and capital costs could negatively impact the Group's business, financial condition, results of operations, cash flows and value of its oil and gas reserves.

2.1.8 Reductions in demand for oil and gas

Increasing consumer demand for alternatives to oil and gas, conservation measures, alternative fuel requirements, and technological advances in fuel economy and renewable energy generation systems, could reduce the demand for oil and gas. Some jurisdictions have implemented policies or incentives to decrease the use of fossil fuels and to encourage the use of renewable fuel alternatives, which could reduce the demand for oil and gas. Advancements in energy efficient products have a similar effect on the demand for oil and gas. The Group cannot predict the impact of changing demand for oil and gas products, and any major changes may have an adverse effect on IPC's business, financial condition, results of operations and cash flow from operations by decreasing increasing costs, limiting access to capital and decreasing the value of oil and gas assets.

2.1.9 Uncertainties associated with estimating reserves and resources volumes

There are numerous uncertainties inherent in estimating quantities of oil and gas reserves and resources (contingent and prospective) and the future cash flows attributed to such reserves and resources. The cash flow information associated with reserves and resources set forth in this document are estimates only. The actual production, revenues, taxes and development and operating expenditures with respect to the reserves and resources associated with the Group's assets will vary from estimates thereof and such variations could be material. Estimates of reserves that may be developed and produced in the future are often based upon volumetric calculations and upon analogy to similar types of reserves rather than actual production history. There is uncertainty that it will be commercially viable to produce any portion of the contingent resources.

In accordance with applicable securities laws, the Group and the Group's independent reserves auditors have used forecast prices and costs in estimating the reserves, resources and future net cash flows as summarized herein. Actual future net cash flows will be affected by other factors, such as actual production levels, supply and demand for oil and gas, curtailments or increases in consumption by oil and gas purchasers, changes in governmental regulation or taxation and the impact of inflation on costs.

References to "contingent resources" do not constitute, and should be distinguished from, references to "reserves". References to "prospective resources" do not constitute, and should be distinguished from, references to "contingent resources" and "reserves". This document contains estimates of the net present value of the future net revenue from IPC's reserves and resources. The estimated values of future net revenue disclosed in this document do not represent fair market value. There is no assurance that the forecast prices and cost assumptions used in the reserves and resource evaluations will be attained and variances could be material.

2.1.10 SAGD recovery process

The Group has implemented a steam assisted gravity drainage ("**SAGD**") recovery process at the Onion Lake Thermal project and would use the SAGD process at the Blackrod project. SAGD is a technology used in the oil industry to recover heavy oil and bitumen by injecting steam into the reservoir, reducing the viscosity of the oil and allowing it to be more easily extracted. This technology enhances operational efficacy, ensuring optimal recovery of heavy oil resources. The SAGD recovery process requires a significant amount of gas or other fuels to produce steam for use in the recovery process. The amount of steam required in the production process can vary and impact costs significantly. The quality and performance of the reservoir can impact the timing, cost and levels of production using this technology. There can be no assurance that the Group's operations will produce at the expected levels or on schedule.

In addition, a significant amount of water is used in SAGD operations. Government regulations apply to access to and use of water. Any shortages in water supplies could lead to increased costs and have a material adverse effect on results of operation and financial condition.

2.1.11 Physical risks related to climate change

Physical climate change related risks can be event-driven with increased severity of extreme weather events, such as cyclones, hurricanes, wildfires, droughts or floods, or long-term shifts in climate patterns with sustained higher temperatures, water stress or sea level rise. These physical risks may have financial and operational implications for the Group, such as direct damage to assets and indirect impacts from supply chain disruption to the delivery of goods and services. Certain of IPC's oil and gas assets are in locations that are proximate to forests and rivers and a wildfire or flood may lead to significant downtime and/or damage.

2.1.12 Hydraulic fracturing

Hydraulic fracturing involves the injection of water, sand, and small amounts of additives under high pressure into tight rock formations that were previously unproductive to stimulate the production of oil and gas. Concerns about seismic activity, including earthquakes, caused by hydraulic fracturing has resulted in regulatory authorities implementing additional protocols for areas that are prone to seismic activity or completely banning hydraulic fracturing in other areas. Any new laws, regulations, or permitting requirements regarding hydraulic fracturing could lead to operational delays, increased operating costs, third-party or governmental claims, and could increase costs of compliance, as well as delay development of certain oil and gas resources. Restrictions or bans on hydraulic fracturing could result in restricting the economic recovery of oil and gas reserves. In addition, the Group may need to dispose of the fluids produced from oil and gas production operations, including produced water. The legal requirements related to the disposal of produced water into a non-producing geologic formation by means of underground injection wells are subject to change based on concerns of the public or governmental authorities regarding such disposal activities.

2.1.13 Regulatory approvals and compliance and changes in legislation and the regulatory environment

Oil and gas operations (including exploration, development, production, pricing, marketing and transportation) are subject to extensive controls and regulations imposed by various levels of government, which may be amended from time to time. Governments may regulate or intervene with respect to exploration, production and abandonment activities, price, taxes (including carbon taxes), royalties and the export of oil and gas. The implementation of new regulations or the modification of existing regulations affecting the oil and gas industry could reduce demand for oil and gas and increase the costs associated with the Group's oil and gas assets, any of which may have a material adverse effect on the business, financial condition, results of operations and prospects of the Group's oil and gas assets. In order to conduct oil and gas operations, the Group will require regulatory permits, licences, registrations, approvals, authorizations and concessions from various governmental authorities. There is a risk that the permits, licences, registrations, approvals, authorizations and concessions currently granted to the Group will not be renewed or that the Group will be unable to obtain all of the permits, licences, registrations, approvals, authorizations and concessions that may be required to conduct operations that it may wish to undertake.

The French government has enacted legislation to cease granting new petroleum exploration licences in France and to restrict the production of oil and gas under existing production licences in France from 2040. There is a risk that France could implement further legislative changes and that the licence regime in France could become more onerous. In Canada, the oil and gas regulatory authorities have implemented regulations regarding the ability to transfer leases, licences, permits, wells and facilities between parties. These authorities have increased the minimum abandonment liability rating of the buyer before they will accept a

transfer of oil and gas assets. These regulations may make it difficult and costly for producers, such as IPC, to transfer or sell assets to other parties.

Change in governments or policies in the countries in which the Group operates may have an impact on the decisions taken and regulations made by such governments on matters that may impact the oil and gas industry including the balance between economic development and environmental policy. The oil and gas industry has become an increasingly political topic, which has resulted in a rise in activism and criticism surrounding oil and gas development, particularly with respect to infrastructure projects. Protests, blockades and demonstrations have the potential to delay and disrupt the Group's activities.

2.1.14 Indigenous land and rights claims

In Canada, Indigenous groups have filed claims in respect of their indigenous and treaty rights against the federal and certain provincial governments as well as private individuals and companies. Consultation delays, claims or objections related to Indigenous rights may disrupt or delay third-party operations, new development or new project approvals on the Group's properties. The Group is not aware of any claims made with respect to its properties or assets; however, if a claim arose and was successful, it may have a material adverse effect on the Group's business, financial condition, results of operation and prospects. The majority of the Group's interests at Onion Lake are situated on traditional reserve lands and are subject to the federal rules and regulations of Indian Oil and Gas Canada as well as of the Onion Lake Cree Nation of Saskatchewan/Alberta. There are risks associated with the management of the Group's interests on these lands, including access and lease terms.

The Canadian federal and provincial governments have a duty to consult with Indigenous people when contemplating actions that may adversely affect the asserted or proven Indigenous or treaty rights and, in certain circumstances, accommodate their concerns. The scope of the duty to consult by federal and provincial governments varies with the circumstances and is often the subject of litigation. The fulfilment of the duty to consult Indigenous people and any associated accommodations may adversely affect the Group's ability to, or increase the timeline to, obtain or renew, permits, leases, licenses and other approvals, or to meet the terms and conditions of those approvals, or to advance project development, including Phase 1 of the Blackrod project.

2.1.15 Change of control under licences

The licence areas associated with the Group's oil and gas assets require government consent or compliance with regulations imposed by oil and gas regulatory authorities to effect a change of control of the owner or an assignment of the ownership interest in the licence area. There may also be contractual restrictions on assignment and change of control, including in the Suffield area of Canada where certain operations are conducted within a Canadian Forces Base under access agreements with Canadian federal government and the Alberta provincial government. Accordingly, should the Group propose to dispose of assets or if there is a change of control of the Group, consent may be required in order to remain in compliance with the applicable licences and concessions. The failure to obtain such consent may have a material adverse effect on the Group. Further, the requirement to obtain such consent may limit the ability of a third party to effect a change of control transaction with the Group.

2.1.16 Reliance on third-party operators

The Group has partners in some of the licence areas associated with the Group's assets. In some cases, including in the Aquitaine Basin in France, the Group is not the operator of the licence and concession areas and must depend on the competence, expertise, judgment and financial resources (in addition to those of its own and, where relevant, other partnership and joint venture companies) of the partner operator and the operator's compliance with the terms of the licences, leases and contractual arrangements. Mismanagement of licence areas by the Group's partner operators or defaults by them in meeting required obligations may result in significant exploration, production or development delays, losses or increased costs to the Group.

2.1.17 Reliance on third-party infrastructure

The Group delivers the products associated with the Group's assets by gathering, processing and pipeline systems, most of which it does not own. The amount of oil and gas that the Group is able to produce and sell is subject to the accessibility, availability, proximity and capacity of these gathering, processing and pipeline systems. The lack of availability of capacity in any of the gathering, processing and pipeline systems, and in particular the processing facilities, could cease refining and result in the Group's inability to realize the full economic potential of its production or in a reduction of the price offered for the Group's production or

increased operating or transportation costs. Any significant change in market factors or other conditions affecting these infrastructure systems and facilities, as well as any delays in constructing new infrastructure systems and facilities could harm the Group's business financial condition, results of operations, cash flows and future prospects.

2.1.18 Competition for resources and markets

The international petroleum industry is competitive in all its phases. The Group competes with numerous other organizations in the search for, and the acquisition of, oil and gas properties and in the marketing of oil and gas. The Group's competitors include oil and gas companies that may have substantially greater financial resources, staff and facilities than those of the Group. The Group's ability to increase its reserves and resources in the future depends not only on its ability to explore and develop its present properties, but also on its ability to select and acquire other suitable producing properties or prospects for exploratory and development drilling. Competitive factors in the distribution and marketing of oil and gas include price and methods and reliability of delivery and storage. Competition may also be presented by alternate fuel sources and renewable energies.

2.1.19 Marketing

A decline in the Group's ability to market oil and gas production could have a material adverse effect on its production levels or on the price that the Group receives for production, which in turn may affect the financial condition of the Group and the market value of the Bonds. IPC's business depends in part upon the availability, proximity and capacity of oil and gas gathering systems, pipelines and processing facilities as well as, potentially, rail loading facilities and railcars. Applicable regulation of oil and gas production, processing and transportation, tax and energy policies, general economic conditions, and changes in supply and demand could adversely affect IPC's ability to produce and market oil and gas. If market factors change and inhibit the marketing of production, overall production or realized prices may decline, which may affect the financial condition of the Group and the market value of the Bonds.

2.1.20 Fraud, bribery and corruption

The operations relating to the Group's oil and gas assets are governed by the laws of many jurisdictions, which generally prohibit bribery and other forms of corruption. While the Group has implemented an anti-corruption compliance program across the Group, the Group cannot guarantee that the Group's employees, officers, directors, agents, or business partners have not in the past or will not in the future engage in conduct undetected by the processes and procedures to be adopted by the Group and for which the Group might be held liable under applicable anti-corruption laws. Despite the Group's compliance program and other related training initiatives, it is possible that the Group, or some of its subsidiaries, employees or contractors, could be subject to an investigation related to charges of bribery or corruption as a result of the unauthorized actions of its employees or contractors, which could result in significant corporate disruption, onerous penalties and reputational damage.

2.1.21 Decommissioning, abandonment and reclamation costs

The Group is responsible for compliance with all applicable laws, regulations and contractual requirements regarding the decommissioning, abandonment and reclamation of the Group's assets at the end of their economic life, the costs of which may be substantial. It is not possible to predict these costs with certainty since they will be a function of requirements at the time of decommissioning, abandonment and reclamation and the actual costs may exceed current estimates. Laws, regulations and contractual requirements with regard to abandonment and decommissioning may be implemented or amended in the future.

2.1.22 Expiration and renewal of licences, leases and production sharing contracts

Certain properties constituting the Group's oil and gas assets are held in the form of licences, leases and product sharing contracts. If the holder of the licence, lease or product sharing contract or the operator of the licence, lease or product sharing contract fails to meet the specific requirement of a licence, lease or product sharing contract, including compliance with environmental, health and safety requirements, the licence, lease or product sharing contract may terminate or expire. There is a risk that the obligations required to maintain each licence, lease or product sharing contract will not be met. The termination or expiration of the licence, lease or product sharing contract, or the working interests relating to a licence may have a material adverse effect on the business, financial condition, results of operations and prospects associated with the Group's oil and gas assets. From time to time, the licences and leases may, in accordance with their terms, become due for renewal; there is a risk that these licences, leases and product sharing contracts

associated with the Group's oil and gas assets will not be renewed by the relevant government authorities, on terms that will be acceptable to the Group. There also can be significant delay in obtaining licence renewals which may already affect the operations associated with the Group's oil and gas assets.

2.1.23 *Litigation*

In the normal course of the Group's operations, it may become involved in, named as a party to, or be the subject of, various legal proceedings. The outcome of outstanding, pending or future proceedings cannot be predicted with certainty and may be determined adversely to the Group and as a result, could have a material adverse effect on the Group's assets, liabilities, business, financial condition and results of operations.

2.1.24 *Pandemics*

The Covid-19 virus and the restrictions and disruptions related to it had a material effect on the world demand for, and prices of, oil and gas as well as the market price of the shares of oil and gas companies generally. There can be no assurance that these effects will not resume or that commodity prices will not decrease or remain volatile in the future due to Covid-19 or other pandemics. These factors are beyond the control of the Group, and it is difficult to assess how these, and other factors, will continue to affect the Group and the market value of the Bonds.

Future Covid-19, including variants, or other pandemics may increase IPC's exposure to, and magnitude of, each of the risks and uncertainties identified in this document that result from, for example, a reduction in demand for oil and gas consumption, lower or volatile commodity prices, reliance on third parties, operational risks and costs and changes in government regulation. The extent to which these pandemics impact IPC's business, results of operations and financial condition will depend on future developments, which are highly uncertain and are difficult to predict, including, but not limited to, the duration and spread of any pandemics, their severity, the actions taken to contain such pandemics or treat their impact, and how quickly and to what extent normal economic and operating conditions resume and their impacts to IPC's business, results of operations and financial condition which could be more significant in upcoming periods as compared with previous periods. Even after these pandemics have subsided, IPC may continue to experience materially adverse impacts to IPC's business as a result of the global economic impact of these pandemics.

2.1.25 *Information security*

The Group is dependent on its information systems and computer-based programs. The Group uses various information technology systems to process and record financial data, manage financial and operational resources, and communicate with employees, consultants, stakeholders, regulators and other third-parties. Failure, malfunction or security breaches by computer hackers and cyberterrorists of any such systems or programs may have a material adverse effect on the Group's business and systems, potentially disrupting operations and affecting network assets and people's privacy. In addition, cyber phishing attempts, in which a malicious party attempts to obtain sensitive information such as usernames, passwords, credit card and banking details (and money), or approval of wire transfer requests, by disguising themselves as a trustworthy entity in an electronic communication, have become more widespread and sophisticated in recent years. The Group manages cyber security risk by ensuring appropriate technologies, processes and practices are effectively designed and implemented to help prevent, detect and respond to threats as they emerge and evolve. The primary risks to the Group include, loss of data, destruction or corruption of data, compromising of confidential customer or employee information, leaked information, disruption of business, theft or extortion of funds, regulatory infractions, loss of competitive advantage and reputational damage.

2.1.26 *Insurance*

Although the Group maintains insurance in accordance with industry standards to address certain risks related to oil and gas operations, such insurance has limitations on liability and may not be sufficient to cover the full extent of potential liabilities. In addition, certain risks are not, in all circumstances, insurable or, in certain circumstances, the Group may elect not to obtain insurance to deal with specific risks due to the high premiums associated with such insurance or other reasons. The payment of any uninsured liabilities would reduce the funds available to IPC. The occurrence of a significant event that IPC is not fully insured against, or the insolvency of the insurer of such event, may have an adverse effect on IPC's business, financial condition, results of operations and prospects. The Group's insurance policies are generally renewed on an annual basis and, depending on factors such as market conditions, the premiums, policy limits and/or deductibles for certain insurance policies can vary substantially. In some instances, certain insurance may become unavailable or available only for reduced amounts of coverage.

2.1.27 *Potential conflicts of interest*

Certain of the individuals who are directors of the Group are also directors of other oil and gas companies and as such may, in certain circumstances, have a conflict of interest requiring them to abstain from certain decisions. Such conflicts of interest within the management structure, may give rise to severe consequences for the Group's operations. These include compromised decision-making integrity, erosion of stakeholder trust, potential legal ramifications, and damage to the Company's reputation. The perception of directors prioritizing the interests of a competitor over the Group may lead to a loss of confidence among shareholders, investors, and other stakeholders, and ultimately affect the Group's operating results and commercial prospects.

As per the date of this Prospectus, the Lundin family through its investment company, Nemesia S.à.r.l. holds approximately 31.5 per cent. of the common shares of the Company. The interests of the Lundin family, exercised through Nemesia S.à.r.l., may not align with and may differ significantly from or may compete with the Company's interests or those of the other shareholders. It is possible that Nemesia S.à.r.l. could exercise its influence over the Company in a manner that does not promote the interests of the other shareholders. For example, there could also be a conflict between the interests of Nemesia S.à.r.l. and the interests of the Company or its other shareholders with respect to dividends or other fundamental corporate matters. The concentration of ownership could delay, postpone or prevent a change of control in the Company, and impact mergers, consolidations, acquisitions or other forms of combinations, as well as distributions of profit, which may or may not be desired by other investors. Such conflicts could have a material adverse effect on the Group's business.

2.2 Risks related to the Group's financial position and liquidity

2.2.1 *Credit facilities*

The Group is and may in the future be party to credit facilities with international financial institutions. The terms of these facilities would normally contain operating and financial covenants and restrictions on the ability of the Group to, among other things, incur or lend additional debt, pay dividends and make restricted payments, encumber its assets, sell assets and enter into certain merger or consolidation transactions. The failure of the Group to comply with the covenants contained in these facilities could result in an event of default, which could, through acceleration of debt, enforcement of security or otherwise, materially and adversely affect the operating results and financial condition of the Group.

In addition, the maximum amount that the Group is permitted to borrow under its credit facilities may be subject to periodic review by the lenders. The Group's lenders generally review its oil and gas production and reserves, forecast oil and gas prices, general business environment and other factors to establish the amount which the Group is entitled to borrow. In the event the lenders decide to reduce the amount of credit available under the credit facilities, the Group may be required to repay all or a portion of the amounts owing thereunder.

If the Group fails to comply with the covenants in these facilities and bonds, is unable to repay or refinance amounts owed at maturity or pay the debt service charges or otherwise commit an event of default, such as bankruptcy, it could result in the seizure and/or sale of the Group's assets by the creditors. The proceeds from any sale of our assets would be applied to satisfy amounts owed to the secured creditors and then unsecured creditors.

2.2.2 *Credit ratings*

Credit ratings affect the Group's ability to obtain short term and long term financing and the cost of such financing. A reduction in the current rating or a negative change in the rating outlook could adversely affect the cost of financing and access to sources of liquidity and capital. Any rating may not remain in effect for any given period of time or may be revised or withdrawn entirely by a rating agency in the future if in its judgment circumstances so warrant.

As per the date of this Prospectus, the credit rating agency Moody's has reaffirmed IPC with the corporate credit rating "B1". The credit rating agency S&P Global Ratings has reaffirmed IPC with the corporate credit rating of "B" with a stable outlook. If the credit ratings are downgraded, the Group may face higher costs of financing, as lenders often associate increased risk with lower credit ratings, demanding higher interest rates as compensation for the perceived risk.

Credit ratings are not recommendations to buy, sell or hold any of the Group's securities.

2.2.3 *Management estimates and assumptions*

In preparing consolidated financial statements in conformity with IFRS, estimates and assumptions are used by management in determining the reported amounts of assets and liabilities, revenues and expenses recognized during the periods presented and disclosures of contingent assets and liabilities known to exist as of the date of the financial statements. For example, in respect of stated provisions for the Group's future asset retirement obligations, these provisions are based on estimates of timing and costs of such future obligations which depend on the economic life of the assets and other factors. In addition, the value of oil and gas properties and impairment testing requires estimates as to reserves and future income attributable to such properties. These estimates and assumptions must be made because certain information that is used in the preparation of such financial statements is dependent on future events, cannot be calculated with a high degree of precision from data available, or is not capable of being readily calculated based on generally accepted methodologies. In some cases, these estimates are particularly difficult to determine and the Group must exercise significant judgment. Actual results for all estimates could differ materially from the estimates and assumptions used by the Group, which could have a material adverse effect on the Group's business, financial condition, results of operations, cash flows and future prospects.

2.2.4 *Disclosure controls and procedures and internal controls over financial reporting*

Effective disclosure controls and procedures and internal controls over financial reporting are necessary for the Group to provide reliable financial and other disclosures and to help prevent fraud. The Group cannot be certain that the procedures it undertakes to help ensure the reliability of its financial reports and other disclosures, including those imposed on it under Canadian securities laws, will ensure that it maintains adequate control over financial processes and reporting. Failure to implement required new or improved controls, or difficulties encountered in their implementation, could harm the Group's results of operations or cause it to fail to meet its reporting obligations. If the Group or its independent auditor discover a material weakness, the disclosure of that fact, even if quickly remedied, could reduce the market's confidence in the Group's consolidated financial statements and harm the market value of the Bonds.

2.2.5 *Income taxes*

Income tax laws relating to the oil and gas industry, such as the treatment of resource taxation or dividends and the imposition of carbon taxes, may in the future be changed or interpreted in a manner that adversely affects the Group's assets. Furthermore, there is a risk that the relevant tax authorities will not agree with management's calculation of the income for tax purposes associated with the Group's assets or that such tax authorities will change their administrative practices to the detriment of the Group. In the event of a successful reassessment of the Group's income tax returns, such reassessment may have an impact on current and future taxes payable.

On September 30, 2022, the EU agreed to impose an EU-wide tax on energy companies deriving income from operations in EU countries ("Solidarity Contribution"). The minimum 33% Solidarity Contribution would be calculated on taxable profits, as determined under national tax rules in the fiscal year starting in 2022 and/or in 2023, which are above a 20% increase in the average yearly taxable profits for the previous four fiscal years. The Solidarity Contribution applicable to the Group in France may be extended or increased, and similar taxes may be levied in other jurisdictions in which the Group operates or proposes to operate.

2.2.6 *Additional funding requirements*

The Group's cash flow from its reserves may not be sufficient to fund its ongoing activities at all times. From time to time, the Group may require additional financing in order to carry out its oil and gas acquisition, exploration and development activities. Failure to obtain such financing on a timely basis could cause the Group to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce or terminate its operations. If the Group's revenues from its reserves decrease as a result of lower oil and gas prices or otherwise, it will affect the Group's ability to expend the necessary capital to replace its reserves or to maintain its production. If the Group's funds from operations is not sufficient to satisfy its capital expenditure requirements, there is a risk that debt or equity financing will be unavailable to meet these requirements or, if available, will be on terms unacceptable to the Group. Continued uncertainty in domestic and international equity and credit markets could materially affect the Group's ability to access sufficient capital for its capital expenditures and acquisitions, and as a result, may have a material adverse effect on the Group's ability to execute its business strategy and on its business, financial condition, results of operations and prospects and also negatively impact market value of the Bonds.

2.2.7 Variations in foreign exchange rates and interest rates

World oil and gas prices are quoted in United States dollars and are therefore affected by exchange rates, which will fluctuate over time. Future exchange rates could accordingly impact the future value of the Group's reserves and resources as determined by independent evaluators. To the extent that the Group engages in risk management activities related to foreign exchange rates, there will be a credit risk associated with counterparties of the Group. An increase in interest rates could result in a significant increase in the amount the Group pays to service any debt that it may incur, which could negatively impact the market value of the Bonds. As at 30 September 2023, the Group has USD 748,732 thousand in total non-current liabilities of which USD 449,028 thousand is interest bearing and USD 180,013 thousand in total current liabilities of which USD 3,425 thousand is interest bearing.

2.2.8 Issuance of debt

From time to time, the Group may enter into transactions to acquire assets or the shares of other organizations. These transactions may be financed in whole or in part with debt, which may create debt or increase the Group's then-existing debt levels above industry standards for oil and gas companies of similar size. Depending on future exploration and development plans, the Group may require additional equity and/or debt financing that may not be available or, if available, may not be available on favorable terms. The level of the indebtedness that the Group may have from time to time could impair the Group's ability to obtain additional financing on a timely basis. If the Group is not able to obtain additional financing on favourable terms or at all, the Group may be unable to execute its growth strategy and make the capital expenditures required to operate the business successfully, take advantage of business opportunities that may arise, successfully develop or enhance products, or respond to competitive pressures, any of which could have a material adverse effect on the Group's business, results of operations, cash flows, financial condition and prospects.

2.2.9 Hedging strategies

From time to time, the Group may enter into agreements to receive fixed prices on its oil and gas production to offset the risk of revenue losses if commodity prices decline; however, if commodity prices increase beyond the levels set in such agreements, the Group will not benefit from such increases. For example, the realized hedging settlement for the first nine months of 2023 resulted in a loss of USD 2,388 thousand on the oil contracts. In addition, the Group may become subject to minimum hedging requirements under its future credit facilities. Similarly, from time to time, the Group may enter into agreements to fix the exchange rate of certain currencies. However, if a currency declines in value compared to another currency, the operation of the Group's assets will not benefit from the fluctuating exchange rate if an agreement has fixed such exchange rate.

2.3 Risks relating to the Bonds

2.3.1 The market value of the bonds may fluctuate

The market value of the Bonds may decrease or fluctuate significantly and may not always reflect the credit worthiness of the Group. A number of factors outside the Group's control may impact its performance and the price of the Bonds. The most significant of these factors are commodity prices of oil and gas, a change in market sentiment regarding the Bonds or the Group and the annual yield as compared to yields on other financial instruments. Changes in market sentiment regarding the Group may be due to changes to the Group's financial forecasts, the publication of research reports by analysts, and changes in general market conditions. If any of these factors occurs, it could have a material and adverse effect on the pricing of the Bonds.

2.3.2 Change of control

The Company's ability to redeem the Bonds with cash may be limited. Upon the occurrence of certain change of control events as defined in the Bond Terms, each individual bondholder shall have a right of pre-payment of the Bonds as set out in the Bond Terms. However, it is possible that the Company may not have sufficient funds to make the required redemption of Bonds, resulting in an event of default under the Bond Terms.

2.3.3 The terms and conditions of the Bond Terms will allow for modification of the Bonds without the consent of bondholders

The Bond Terms contain provisions for calling meetings of bondholders to consider matters affecting their interests generally. These provisions permit defined majorities to bind all bondholders, including bondholders who did not attend and vote at the relevant meeting and bondholders who voted in a manner contrary to the

majority. Certain significant modifications may be made following approval of a quorum of one or more persons holding or representing not less than two-thirds in aggregate nominal amount of the Bonds for the time being outstanding, including modifying the date of maturity of the Bonds or any date for payment of interest thereof, reducing or cancelling the amount of principal or the rate of interest payable in respect of the Bonds or altering the currency of payment of the Bonds. The trustee for the Bonds may, without the consent of the bondholders, agree to certain modifications of the Bond Terms and other finance documents which, in the opinion of the Bond Trustee, are proper to make.

2.3.4 Secondary market in the Bonds and liquidity risk

The Bonds may have no established trading market when issued, and one may never develop. Furthermore, as the Group is relying upon exemptions from registration requirements in the placement of the Bonds, the Bonds may only be transferred in a transaction registered under or exempt from registration or prospectus requirements in the future. Therefore, investors may not be able to sell their Bonds easily or at prices that will provide them with a yield comparable to similar investments that have a developed secondary market. The Group cannot assure investors as to the future liquidity of the Bond. Lack of liquidity in the secondary market may adversely affect the market value of the Bonds.

2.3.5 Optional Redemption Risk

The Bonds are subject to optional redemption by the Company at their outstanding principal amount, plus accrued and unpaid interest to the date of redemption, plus a premium calculated in accordance with the terms and conditions of the Bond Terms. This is likely to limit the market value of the Bonds. It may not be possible for bondholders to reinvest proceeds at an effective interest rate as high as the interest rate on the Bonds.

2.3.6 Structural subordination of the Bonds

The Bonds are unsecured and the Bonds may be structurally subordinated to debt of the Guarantors. The Guarantors are permitted to incur certain types of secured and unsecured indebtedness. Although the Guarantors have provided Guarantees in respect of the Bonds, the obligations of the Guarantors under the respective Guarantees may be subordinated to the obligations of the Guarantor under any secured debt permitted under the Bonds. Such subordination may include subordination in terms of ranking, rights to receive and claim payments in an event of default and delay in enforcement rights (up to 180 days), turnover provision and other customary subordination provisions reasonably requested by the lenders under such secured debt. Further, any unsecured debt may be guaranteed by a Guarantor which does not provide a corresponding guarantee in favour of the Bonds, allowing creditors in respect of that unsecured debt to rank ahead of the Bonds. In the event that such secured debt or unsecured guaranteed debt becomes due or a lender proceeds to enforce against the assets that secure the debt, the assets would be available to satisfy obligations under the secured debt before any payment would be made on the Bonds. Any assets remaining after repayment of the Company's secured debt or structurally prioritized debt may not be sufficient to repay all amounts owing under the Bonds.

4.7 Norwegian tax considerations

4.7.1 General

The following information is a general overview of certain Norwegian tax rules relevant for holders of Bonds that are tax residents in Norway (in this Section 4.7 "*Norwegian tax considerations*" referred to as the "**Norwegian Bondholders**"). The summary is based upon the laws of Norway as it is interpreted and practiced as of the date of this Prospectus. Such rules, laws, and regulations may be subject to changes after this date, possibly on a retroactive basis. The summary does not address foreign (i.e., non-Norwegian) tax laws.

The summary is not intended to be, nor should it be construed to be, legal or tax advice. Prospective investors should consult their own professional advisers as to the effects of state, local or foreign laws, including Norwegian tax law, to which they may be subject.

Bondholders resident outside of Norway will not be tax liable in Norway on interests or capital gains derived from the Bonds unless the Bonds (i) are connected to a Bondholder's permanent establishment in Norway or (ii) withholding tax applies:

- (i) The Norwegian tax rules applicable to income deriving from such Bonds, held through a Norwegian permanent establishment, are generally the same as those set out for Norwegian Bondholders below. The mere holding of Bonds should not in itself create a permanent establishment in Norway.
- (ii) Norwegian withholding tax on interest is applicable only in circumstances where the Bondholder is a related company of the Issuer (minimum 50 per cent. ownership threshold to be met) and the Bondholder is a resident in a low tax jurisdiction. Norwegian withholding tax on interests will in such circumstances be at a flat rate of 15 per cent. on the gross interest amount, unless a lower tax rate applies under a relevant double tax treaty.

Special rules apply for Norwegian Bondholders that cease to be tax residents in Norway or that for some reason are no longer considered liable to taxation in Norway in relation to their Bonds. Such Bondholders are encouraged to consult their own tax advisors.

The overview below is based on the assumption that the Bonds are classified as debentures (Norwegian: *Mengdegjeldsbrev*) for Norwegian tax purposes.

4.7.2 *Interest payments on Bonds*

Norwegian Bondholders are taxable in Norway for interest payments received on the Bonds as ordinary income. The Norwegian tax rate on ordinary income is 22 per cent., or 25 per cent. for financial institutions subject to Norwegian Financial Tax (Norwegian: *Finansskatt*). Interest is subject to Norwegian income tax in the year of accrual.

For Norwegian Bondholders holding Bonds issued at a discount (compared to the nominal value), the discount will for tax purposes be considered to be interest, and taxed when the Bond is realised.

4.7.3 *Redemption and realisation of Bonds*

Norwegian Bondholders are taxable in Norway for capital gains on the redemption or realisation of Bonds and have a corresponding right to tax deductions for losses that arise on such redemption or realisation.

The tax liability applies irrespective of how long the Bonds have been owned and the number of Bonds that have been redeemed or realised. Gains are taxable as ordinary income, and losses can be deducted from ordinary income, in the year of redemption/realisation. The Norwegian tax rate on ordinary income is 22 per cent., or 25 per cent. for financial institutions subject to Norwegian Financial Tax.

Gains or losses are calculated per Bond, and will equal the difference between the consideration received on the redemption or realisation of the Bond and the cost price of the Bond. Costs incurred in connection with the acquisition, redemption or realisation of Bonds may be deducted in the calculation of the taxable gain/loss in the year of redemption/realisation.

4.7.4 *Net wealth tax*

Corporations and similar entities are not subject to net wealth tax in Norway.

Norwegian Bondholders, who are physical persons, are subject to net wealth taxation in Norway on net (taxable) wealth exceeding NOK 1,700,000. The net wealth tax rate is currently 1.00 per cent. on net wealth between NOK 1,700,000 and NOK 20,000,000, and 1.10 per cent. on net wealth exceeding NOK 20,000,000.

For Bonds listed on a Stock Exchange, the tax value for assessment purposes is the listed value as of 1 January in the year of the assessment. Unlisted Bonds are generally valued at the market value by the end of the income year.

4.7.5 *Transfer tax, VAT etc.*

There are no transfer taxes, stamp duty, or similar charges currently imposed in Norway on the acquisition, redemption, or realisation of Bonds. Further, there is no VAT on the transfer of Bonds.

4.7.6 *Inheritance tax*

Norway does not impose inheritance tax or similar tax on inheritance or gifts. However, an heir or a recipient of gifts who has received Bonds will acquire the donor's tax input value on the Bonds based on principles of continuity. Thus, the heir/recipient will be liable to taxation for any increase in value in the donor's time of ownership. The gain will be taxable at the time of the heir's/recipient's realisation of the Bonds.

4.8 **Tax warning**

Potential investors should be aware that changes in the tax legislation of the investors and of the Issuer's country of incorporation may have an impact on the income received from the Bonds. There can be changes in the applicable tax legislation, increased taxation by national, local, or foreign authorities, new or modified taxation rules and requirements, including requirements relating to the timing of any tax payments, which may have an impact on the income received from the Bonds.

4.9 **Credit rating**

The credit rating agency Moody's Deutschland GmbH ("**Moody's**") has reaffirmed IPC with the corporate credit rating "B1" and the Bonds with the bond credit rating "B1" with a stable outlook. Obligations rated "B" by Moody's are judged to be speculative and subject to high credit risk according to Moody's published global long-term rating scale.

The credit rating agency S&P Global Ratings, acting through S&P Global Ratings Canada, a business unit of S&P Global Canada Corp ("**S&P**") has reaffirmed IPC with the corporate credit rating of "B" with a stable

outlook and the Bonds with the bond credit rating of "B+" with stable outlook. Obligations rated "B" by S&P are judged to be more vulnerable to adverse business, financial and economic conditions but currently has the capacity to meet financial conditions according to S&P's published ratings scale.

Moody's is established in the European Union and are registered under Regulation (EC) No. 1060/2009 of the European Parliament and of the Council of 16 September 2009 on credit rating agencies, as amended (the "**CRA Regulation**"). A credit rating is not a recommendation to buy, sell or hold securities and may be subject to revision, suspension or withdrawal at any time by the relevant rating agency.

The amount payable by a Guarantor under this indemnity will not exceed the amount it would have had to pay under this Agreement if the amount claimed had been recoverable on the basis of a guarantee.

7.3 Changes in financial position

There has been no (i) material adverse change in the prospects of the Company or the Group (i.e., including the Guarantors) since the date of its last published audited financial statements, (ii) significant change in the financial performance of the Group (i.e., including the Guarantors) since the end of the last financial period for which financial information has been published to the date of this Prospectus, or (iii) significant change in the financial position of the Group (i.e., including the Guarantors) which has occurred since the end of the last financial period for which financial information have been published.

7.4 Trend information

During the third quarter of 2023, the Group's assets delivered average net production of 50,200 boepd (barrels of oil equivalents per day), above its high-end guidance for the third quarter in succession. Above high-end guidance performance in Canada was partially offset by some downtime from two production wells in Malaysia that are scheduled for workover intervention activity. This work is expected to be concluded by January 2024. Given the very strong performance during the first nine months of 2023 averaging around 51,600 boepd, full year 2023 average net production guidance remains unchanged at greater than 50,000 boepd, above the Company's original high end guidance.

Following the successful completion of FEED studies ("Front-End Engineering, Execution, and Design", with the objective to refine the project scope, provide accurate cost estimates, and develop a comprehensive plan for the subsequent phases of project execution), and the continued strong production performance from well pair three during 2022, IPC took the decision in the first quarter of 2023 to advance the development of Phase 1 of the Blackrod project.

Blackrod refers to a heavy oil project situated to the south of Fort McMurray in the Athabasca region of northern Alberta, Canada. In the context of oil extraction, "*in situ*" refers to the process of recovering bitumen (heavy oil) from the subsurface without the need for mining. This particular project, known as the Blackrod asset, represents a significant opportunity for the extraction of heavy oil. IPC is the operator of a pilot program at Blackrod, having recorded positive results from the production testing phases of three pilot well pairs. In 2020, Well Pair 3 was brought online and continued production through the end of 2022. Phase 1 of the project pertains to the initial stages, involving exploration, assessment, and feasibility studies to determine the potential and viability of extracting heavy oil reserves. This phase includes obtaining the above-mentioned regulatory approvals, planning of infrastructure, and the conducting the first projects (pilot projects) at Blackrod.

Development capital expenditure to first oil is estimated at approximately USD 850 million. First oil of the Phase 1 development is estimated to be in late 2026, with forecast production of 30,000 boepd by 2028. IPC intends to fund the Phase 1 development with cash on hand and forecast future cash flow generated by the Group's operations.

IPC's capital allocation framework consists of distributing to shareholders a minimum of 40 per cent. of the free cash flow generated by IPC, provided that IPC's net debt to EBITDA ratio is at or below 1 time. These shareholder distributions are planned to be implemented by continued share repurchases under the Normal Course Issuer Bid ("**NCIB**") as well as the consideration by IPC of other forms of shareholder distributions, subject to further applicable regulatory and corporate approvals. In the fourth quarter of 2022, IPC announced the renewal of the NCIB, with the ability to repurchase up to approximately 9.3 million common shares over the twelve-month period to early December 2023. IPC completed the purchase and cancellation of these 9.3 million common shares by 17 November 2023. As at 30 November 2023, IPC had a total of 128,224,820 common shares issued and outstanding, with no common shares held in treasury.

The IPC Board of Directors has approved, and the Toronto Stock Exchange has accepted, the renewal of IPC's NCIB for a further twelve months from December 2023 to December 2024. The renewed NCIB program permits IPC to purchase on the Toronto Stock Exchange and/or Nasdaq Stockholm, and cancel, up to a further 8.3 million common shares, representing approximately 6.5 per cent. of the total outstanding common shares (or 10 per cent. of IPC's "public float" under applicable Toronto Stock Exchange rules) as at 30 November 2023.

Despite the level of capital investment expected for 2024, in particular related to the Blackrod Phase 1 project, and notwithstanding the capital allocation framework described above, IPC's current intention is to complete the renewed NCIB program during 2024. The Company continues to believe that materially growing its 2P reserves ('Proved plus Probable reserves', which is a classification measuring an oil reserve's degree of certainty of being commercially recoverable), production and asset value whilst reducing its share count is a winning combination for shareholders.

With the publication of its second quarter 2023 financial report, IPC published its fourth annual Sustainability Report and its first standalone Task Force on Climate- Related Financial Disclosures Report. IPC targets a reduction of its net GHG emissions intensity by the end of 2025 to 50 per cent. of IPC's 2019 baseline and IPC remains on track to achieve this reduction. Furthermore, IPC extended its commitment to remain at 2025 levels of 20 kg CO₂/boe through to the end of 2027.

Other than as described above there are no other known trends, uncertainties, demands, commitments or events that are reasonably likely to have a material effect on the Group's (i.e., including the Company's and the Guarantors') prospects for the current financial year.

If the Bondholder has voted directly for any of its nominee registered Bonds, the Bondholder's votes shall take precedence over votes submitted by the nominee for the same Bonds.

A Summons for a repeated Bondholders' Meeting shall also contain the voting results obtained in the initial Bondholders' Meeting.

- (c) A repeated Bondholders' Meeting may only be convened once for each original Bondholders' Meeting. A repeated Bondholders' Meeting may be convened pursuant to the procedures of a Written Resolution in accordance with Clause 15.5 (*Written Resolutions*), even if the initial meeting was held pursuant to the procedures of a Bondholders' Meeting in accordance with Clause 15.2 (*Procedure for arranging a Bondholders' Meeting*) and vice versa.

15.5 Written Resolutions

- (a) Subject to these Bond Terms, anything which may be resolved by the Bondholders in a Bondholders' Meeting pursuant to Clause 15.1 (*Authority of the Bondholders' Meeting*) may also be resolved by way of a Written Resolution. A Written Resolution passed with the relevant majority is as valid as if it had been passed by the Bondholders in a Bondholders' Meeting, and any reference in any Finance Document to a Bondholders' Meeting shall be construed accordingly.
- (b) The person requesting a Bondholders' Meeting may instead request that the relevant matters are to be resolved by Written Resolution only, unless the Bond Trustee decides otherwise.

majority (the “**Voting Period**”), which shall be at least 10 Business Days but not more than 15 Business Days from the date of the Summons.

- (f) Only Bondholders of Voting Bonds registered with the CSD on the Relevant Record Date, or the beneficial owner thereof having presented relevant evidence to the Bond Trustee pursuant to Clause 3.3 (*Bondholders’ rights*), will be counted in the Written Resolution.
- (g) A Written Resolution is passed when the requisite majority set out in paragraph (e) or paragraph (f) of Clause 15.1 (*Authority of Bondholders’ Meeting*) has been obtained, based on a quorum of the total number of Voting Bonds, even if the Voting Period has not yet expired. A Written Resolution will also be resolved if the sufficient numbers of negative votes are received prior to the expiry of the Voting Period.
- (h) The effective date of a Written Resolution passed prior to the expiry of the Voting Period is the date when the resolution is approved by the last Bondholder that results in the necessary voting majority being obtained.
- (i) If no resolution is passed prior to the expiry of the Voting Period, the number of votes shall be calculated at the close of business on the last day of the Voting Period, and a decision will be made based on the quorum and majority requirements set out in paragraphs (e) to (g) of Clause 15.1 (*Authority of Bondholders’ Meeting*).

- (d) The Bond Trustee shall not be considered to have acted negligently in:
 - (i) acting in accordance with advice from or opinions of reputable external experts;
